

NICOLINE LODAHL ISACHSEN

User Experience Designer

I investigate how products and digital solutions work in practice, identify where users encounter problems, and turn insights into improvements.

PROFILE

I am a Process and Innovation Engineer with two years in Demant's Usability & Co-Creation team, conducting user interviews and usability tests for hearing aids and apps in a regulated medtech environment.

My time at Demant sparked my interest in digital design. I like understanding where a product leaves people guessing and how design can make their next step clearer. In my bachelor project, I explored this by building and testing a Figma training prototype. I am keen to develop my design skills further alongside experienced designers.

EDUCATION

BEng in Process and Innovation

Technical University of Denmark (DTU) · 2022–2026

A 3.5-year engineering degree combining user-centred product development, innovation processes and business understanding. Trained in Design Thinking and the Double Diamond to:

- Research and define user and customer needs
- Facilitate workshops and cross-functional development
- Prototype, test and improve product concepts
- Evaluate ideas from user and business perspectives

RELEVANT EXPERIENCE

Demant

Team Usability & Co-Creation | 2024–2026

Bachelor Project

DTU × Demant/Oticon · Sep 2025 – Jan 2026

Investigated why users struggled to adopt a hearing aid feature and designed an in-app training solution to improve the experience.

- Analysed 64 survey responses and user interviews, identifying missing guidance and feedback as key barriers
- Facilitated workshops with users and usability engineers to explore possible solutions
- Designed a high-fidelity Figma prototype of a five-step training flow and refined it through testing with nine users aged 56–85

Usability Engineering Intern

Full-time · Feb – Jun 2025

Led a comparative usability study exploring how first-time users experienced two different hearing solutions.

- Planned and conducted a three-session study with eight first-time users
- Analysed user behaviour, identified usability challenges and presented findings to 50+ stakeholders
- Coordinated with stakeholders across teams throughout the research process

Student Assistant

Part-time · May 2024 – Jun 2026

- Independently planned and conducted six usability studies and UX evaluations of physical and digital products
- Translated research findings into recommendations, personas and user stories for product development
- Contributed to interviews, surveys and co-creation activities, documenting findings and analysing user data in Excel

Other experience

LiqTech (B2B analysis), guide at Copenhagen Airport, retail at Kvickly and exam invigilation.

WHAT I BRING TO A TEAM

1. **Practical usability experience** to independently plan and run interviews and tests, and turn findings into recommendations
2. **Clear communication of user insights** to help designers and developers decide what to improve and why
3. **A willingness to learn** through hands-on design work, feedback from experienced colleagues and iteration

RECOMMENDATION

"In both roles [student assistant and intern], she has consistently demonstrated strong ownership, independence, and a clear ability to drive work forward with minimal guidance."

Lisbeth Nøhr Demant · Direct manager, Demant
Senior Usability Engineer & Student Assistant Manager

TOOLS & LANGUAGES

UX & collaboration: Figma (basic prototyping), Miro, Canva

Research & analysis: Excel (advanced), R (basic)

Documentation: Microsoft Office, SharePoint, Confluence

Additional: HTML/CSS (basic), Arduino, CAD, AI tools (ChatGPT, Copilot, Claude used for research, ideation and analysis support)

Languages: Danish (native) · English (fluent)

A personal note: Like everyone else, I have used Claude as a sparring partner when writing this CV. If you're curious about the person behind it, I'd be happy to have a chat.
