

# Nicoline Lodahl Isachsen

## UX Designer with *an engineer's* eye for detail

I am a Process & Innovation engineer from DTU with two years of experience from Demant's Usability & Co-Creation team, where I've worked with user research, usability studies and co-creation across technical and regulated environments. I've conducted 50+ interviews with users and subject matter experts, facilitated workshops with cross-functional teams, and developed a Figma prototype through several rounds of testing as part of my bachelor project. Alongside this, I designed and developed my own portfolio website using an AI-assisted workflow, which gave me hands-on experience with HTML and CSS and a genuine interest in building digital experiences, not just researching them. I use AI tools actively across research, design and development.

### EXPERIENCE

#### ● Demant - Student Assistant, Internship & Bachelor Project Smørum · 2024-2026

- Planned, conducted and reported usability studies for both physical and digital products.
- Facilitated co-creation workshops across users and developers, and contributed to user research through interviews and surveys.
- Analysed and visualised user data to translate insights into concrete design recommendations.
- Improved user flows in Demant's Companion app based on user insight and testing.
- Designed a Figma prototype with a built-in training flow to help users learn and use the tap-control feature.

#### ● Liqtech - Student Assistant Ballerup · 2023-2024

- Identified and qualified B2B customers through market and industry analyses to support business development.
- Developed visual presentations and communication material for client dialogue.

#### ● Veo Technologies - Production Employee Nordvest · 2024-2026

- Experience with quality and collaboration in a tech-oriented production environment.

#### ● Kvickly - Service Employee Nørrebro · 2023-2024

- Strengthened experience with customer contact and problem-solving under time pressure.

## CASES

2025

### Bachelor Project

*Prototype: Tap Control Training feature*

- Developed a Figma prototype for a training flow for the tap-control feature on Oticon hearing aids
- Used AI to translate users' ideas from co-creation workshops into visual storyboards

Presented and evaluated together with Demant's usability team and audiologists.

2024

### Internship Project

*Competitive benchmarking: Apple vs. Oticon*

- Full-time internship, 20 weeks — recruited participants, collaborated with stakeholders across the organisation, ran tests and drove the project independently from research to delivery
- Used AI to compile and gain overview of a week's worth of field data and spot patterns in research and interviews

The recommendations feed into ongoing product work.

## REFERENCE

**Lisbeth Nøhr**

Design & Usability Engineer, Demant  
lhde@demant.com

Lisbeth was my closest manager throughout my time at Demant and can give a direct reference for my work with usability studies and co-creation.
